HOTSTAMPING

Hot stamping is debossing with a metallic finish, created by applying foil between the to-be-decorated surface and the dye.

- Exceptional superior impression
- Create a unique 3D look
- Ideal for real and imitaion leather product
- Available in silver and gold finish

EMBROIDERY

Embroidery is decorating a fabric by stitching thread in a pattern.

- Classic decoration technique
- High value look
- Suitable for both flat and irregular surfaces
- Tread colours to match any logo
- Up to 12 colours per embroidery
- High impact wool stitch

SUBLIMATION

Sublimation is a printing method where ink is heated to turn into gas and form a permanent bond with the to-be-decorated material.

- Premium full-colour photorealistic prints
- Suitable for polyester fabrics (minimum 60% polyester) and polymer coated products
- Soft, flexible imprint that can even be applied over seams and zips
- Decoration is resistant to fading and cracking
- Only suitable for white products

DOMING

Doming is used to create a 3D version of your image by shaping a raised surface beneath the print. A mould is formed, printed and filled with epoxy which is then hardened to maintain its shape.

- Create a 3D effect
- Strong resistance to fading or damage
- Can only be applied to flat surfaces

TRANSFER

Transferring is done by first creating a screen print image on paper and then using heat and glue to transfer it onto the chosen article.

- Ideal for fabrics
- Perfect for logos with many colours
- Allows for extreme detail like small text
- Free standing text
- No contours required
- Economical solution for multicolour printing of smaller quantities

SCREENROUND

Screen round is based on the same method as screen print but the product is turned during the printing proces, making this method suitable for curved surfaces.

- Long lasting results

- Economic choice for large quantities
- Multi-colour decoration available on a selection of pens

SCREENPRINT

Screen printing or silk screen is a printing method where the image is imposed on a mesh screen with blank areas coated with an impermeable substance. Inks are then pressed through the mesh screen to produce clear, sharp images.

- Long lasting results
- Good cost-effective solution for larger quantities
- Allows single and multi-colour decorations
- Ideal for text
- Can only be applied to flat surfaces

PADPRINT

Pad printing or tampon printing is an indirect offset printing process that involves ink being transferred from a engraved metal plate via a silicone pad onto the product creating the image.

- Great all-round cost-effective solution
- Can be applied on virtually any shape
- Suitable for any surface texture, including soft products like stress balls
- Perfect for multi coloured logos
- Fast and economical

DIGITAL PRINTING

Digital printing is similar to inkjet printing. Micro droplets of ink are squirted onto a product to create an image. The ink is instantly cured by exposing it to UV light.

- Perfect for multi coloured logos
- Create a unique effect with matt, gloss or embossed finishes
- Strong resistance to fading or damage
- Ideal for small quantities
- Can only be applied to flat or slightly curved surfaces
